10/090, 035

(ST.C)

Please search the following:

DNA encoding SEQ ID NO:2 or 4.
 SEQ ID NO:1-4.
 oligo of SEQ ID NO:1 and 3

Please search both commercial and patent databases, including pending. Thanks

Medina A. Ibrahim Patent Examiner GAU:1638 CM1-9E03 mailbox-9E12 (703)306-5822

Pending Nucleic Acid and/or Pending Amino Acid database searches now generate two sets of results. These databases were split into to two parts to reduce the time needed to update the databases daily. The split freed up more machine time for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions, .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions, .rapm and .rapn

The Pending database search results should not be left in the case because they contain data that is confidential.

oluntary Results Feedback Form	
> I am an examiner in Workgroup: Example: 1610	_
Relevant prior art found, search results used as follows:	
☐ 102 rejection	
103 rejection	
Cited as being of interest.	
Helped examiner better understand the invention.	
Helped examiner better understand the state of the art in their technology.	
Types of relevant prior art found:	
☐ Foreign Patent(s)	
<ul> <li>Non-Patent Literature         <ul> <li>(journal articles, conference proceedings, new product announcements etc.)</li> </ul> </li> </ul>	
Relevant prior art <b>not found:</b>	
Results verified the lack of relevant prior art (helped determine patentability).	
Results were not useful in determining patentability or understanding the invention.	
omments:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It currently consists of 3 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /organism="Oryza sativa (japonica cultivar-group)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

On Oct 17, 2001 this sequence version replaced gi:13430001.

Genes were predicted from the integrated results of the following:
GENSCANI.0, BLASTNZ.0, BLASTNZ.0 as well as SplicePredictor
(October 1998 version). The genomic sequence was searched against
NEDI NonRedundant Protein database, nr

(ftp://ncbi.nlm.nih.gov/blast/db) and the CDNA sequence database at

(ftp://ncbi.nlm.nih.gov/blast/db) and the CDNA sequence database at

(ftp://ncbi.nlm.nih.gov/blast/db) and the CDNA sequence database at

(ftp://ncbi.nlm.nih.gov/blast/db) and the CDNA sequence database with BLASTP2.0. ESTS represent

NGF Protein homologies of the coding regions were searched against

Agene with identity or significant homology to a protein is

classified based on the protein name to indicate the homology (covering

significant homology to any protein name to indicate the homology to a significant homology to any protein homology to any protein name to indicate the homology to any protein name to indicate the homology to any protein name to indicate the homology to any protein of the sequence is from Sp6 to 77 of the PAC clone. The orientation of the sequence is from Sp6 to 77 of the PAC clone. Detailed information on overlap and assembly quality together with annotation/Onalifiers

Information on performance of analysis and a more detailed
annotation of this entry and other sequences of chromosomes 3, 4
and 5 can be viewed at: http://www.mips.blochem.mpg.de/proj/thal/
this fragment has an overlap with ATCHRIV8S at the 5' end and an
overlap with ATCHRIV87 at the 3' end.

/note="Organ: tassel, kernal, silk, husk, root, leaf;
Vector: pGAD10; Site_1: EcoRI; cDNA library from fully
differentiated maize tissues from an active Mutator plant.
Tissue ratio is 4:2:1:1:11 (tassel, kernel, silk, husk,
root, leaf). Unidirectionally cloned. New library number
given to library 707 for additional sequencing."

//note="Organ: green seedlings; Vector: pAD-GAL4; Site_1:
ECORI; Site_2: Xho!; ds-CDNA molecules were generated as
follows. First-strand CDNA was prepared from oilgo-dT
resulting DNA:RNA hybrid was treated with RNase H and used
synthesis. After the addition of EcoRI adaptors, the
ds-CDNAs were digested with XhoI and size-selected. The
resulting molecules were directionally cloned into the
ECORI and XhoI sites of the Hybrizap lambda vector
(Stratagene) and excised as PAD-GAL4 phagemids."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-10-090-035-2

Sequence 2, Application US/10090035

Patent No. US/20020170089A1

GENERAL INFORMATION:
TITLE OF INVENTION: Notein Actids Encoding Defense Inductble
TITLE OF INVENTION: Proteins and Uses Thereof
TITLE OF INVENTION: Proteins and Uses Thereof
CURRENT APPLICATION NUMBER: US/10/090,035

CURRENT FILING DATE: 2002-02-38

PRIOR APPLICATION NUMBER: 60/272,227

NUMBER OF SED ID NOS: 25

SOFTWARE: FastSED for Windows Version 4.0

LENGTH: 93
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

Sequence 6, Application US/10090035

Sequence 6, Application US/10090035

Patent No. US20020170089A1

Patent No. US20020170089A1

Patent Information: Carl R.

TITLE OF INVENTION: Mucleic Acids Encoding Defense Inducible

TITLE OF INVENTION: Proteins and Uses Thereof

TITLE OF INVENTION: Proteins and Uses Thereof

TITLE OF INVENTION: Proteins and Uses Thereof

CURRENT APPLICATION WUMBER: US/10/090,035

CURRENT FILING DATE: 2022-228

PRIOR PALICATION WUMBER: 60/272,227

PRIOR FILING DATE: 02/28/2001

NUMBER OF SEC ID NOS: 25

SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 93
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 10. Sequence 18, Application US/10090035

Patent No. US20020170089A1

GENERAL INFORMATION:
APPLICANT: Simmons, Carl R.
TITLE OF INVENTION: Nucleic Acids Encoding Defense Inducible
TITLE OF INVENTION: Proteins and Uses Thereof
FILE REFERENCE: 35718/242990

CURRENT APPLICATION UNMER: US/10/090,035

CURRENT ELIGATION NUMBER: 60/272,227

PRIOR FILING DATE: 2002-02-28

PRIOR FILING DATE: 02/28/2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 94;
